		Machine Learning: Python, TensorFlow	<i>Skillful</i>

EMPLOYMENT HISTORY

Jan 2025 — May 2026

Freelance Web dev, Self Employed DKI Jakarta

Simanteb, School Building Maintenance System – sole developer – start 2025 Jan
Full-stack maintenance management system for school facilities built around temperature and electricity sensor data. Built a RESTful API connecting a React frontend to the Laravel backend, giving maintenance staff a CRUD interface to monitor sensor readings and manage maintenance tasks. When this website was hosted, Git was used as a way to securely transfer the files from the web onto the hosting server and a way to update the server easily. Github was also used as a backup to all projects.

ISCCO, Design Change Tracking system for Bridge Construction – sole developer – start:2026 Jan
Full-stack project-tracking platform built with Laravel, Inertia, and React, with a custom IFC viewer that maps design changes onto 3D BIM models. Built and hosted a separate Flask server that serves a custom-built ML model that predicts the risk of cost-overrun from user-input risk factors.

ACCESSA, School navigation Website – sole developer – start: 2025, Dec
Developed a website requested by a client focused on accessibility for visually impaired students. The site is a React frontend that has a voice module that speaks navigation options and connects to an external custom Python backend running Vosk for offline speech-to-text, to recognize numbers for a choice-based navigation system.

TOKOALI, A stock management system - sole developer – Start: 2025, Apr
Developed a website for a local shop to manage stocks, the Site has a React frontend that connects to a backend that is structured as a REST API that is developed by using the Go language that I chose as a way to broaden my experience.
